

# Professional handling of all your calls

Do you often find that you're unable to take calls, but want to tell people when you can call them back? Aurora spondi – the smartest mobile switchboard on the market – is a user friendly, flexible telephony solution that gives you full control of your calls.

Is your company looking for a flexible telephony solution bursting with smart functions? That's where Aurora spondi comes in. Aurora spondi is cloud-based and can be used standalone or as an add-on to an existing switchboard solution. The product is available as an iPhone or Android app and over the web.

## Next-generation mobile switchboard

The mobile switchboard has a modular structure, and the Response Groups module is the smartest on the market. With the Response Groups module, you can automatically forward calls to colleagues whenever you're busy.

With Aurora spondi, your company knows exactly who is calling. Caller ID displays their name and organisation. You can also instantly see the activated response group, and which other colleagues are being called. And you know the moment someone picks up. Would you like to record and save your important calls? The Call Recording module makes it easy.

## Keep track of your calls

Two simple taps is all it takes to set an absence or give the caller the option to be called back or leave a voice message. There are lots of prerecorded absence messages to choose from, or you can record your own. No need to worry that you'll forget to call back – Aurora spondi will remind you. It's easy to listen to your voice messages in any order directly from Aurora spondi, so you don't have to call your answering machine.
